

Trimble

Perspective

Version 1.1.1

This document contains summary information on new features, late-breaking product information, updates, and troubleshooting tips not covered in the Trimble® Perspective® documentation.

Introduction

These release notes describe the features and enhancements that are new in version 1.1.1 of the Trimble® Perspective software. For further support information, go to www.trimble.com/Support/.

System Requirements

- Operating system: Microsoft® Windows® 10 – 64 bit
- Processor: minimum Intel® 6th Generation Core™ i7 2.5 GHz or better
- RAM: minimum 8GB (16GB and higher recommended)
- Graphics card: Intel® HD Graphics 520 or better

Other requirements:

Solid State Drive (SSD) for maximum performance (pref. 500GB) – strongly recommended.

Upgrade procedure

Install the software from this location (**Internet connection required during installation and license verification**): [Trimble installation Manager](#)

Version: 1.1.1

Date: 3 February 2020

Resolved Issues

Performance: Improved application start time.

Performance: Resolved issue with some processing not properly terminating when exiting the application.

Performance: Significantly reduced processing time of colorization.

Performance: Improved visual quality of colorizing occluded areas.

Import: Resolved issue causing random crashes when importing TZF files specifically when the TZF files contains large coordinate values.

Usage: Resolved issue where rotating the scene wasn't possible when mouse or finger was over an annotation.

Display: Resolved issue when resolution was set to 125% which could cause a crash or prevent projects from being created.

Display: Resolved issue with point cloud render changes not being applied correctly.

Display: Improved the Z axis filter to apply to all stations not just those displayed.

Registration: Resolved issue where unlevelled station would sometimes be used as the reference when registering.

Interoperability: Added support enhancements for Trimble Capture Software
